                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            synthesized from mRNA using a primer consisting of a poly(dT) sequence with an XhoI restriction site. EcoRI adaptors were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA insert is protected from XhoI digestion via methylation during first strand synthesis. The cDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into E.coli ElectroMax DHIOB host cells. Plants were inoculated by Shuxian Li (clen Hartman lab, University of Illinois). Library was constructed by Steve Clough (Lila Vodkin lab, University of Illinois)."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         were collected and pooled from several plants and frozen immediately after harvesting in liquid nitrogen. The cDNA was prepared using an Xho1-poly(dT) linker-primer. An EcoRI adapter was ligated to the blunt end cDNA and the products were digested with EcoRI and XhoI enabling directional cloning into the lambda ZAP Express vector. The library was amplified using the host strain XLI-Blue MRF'. Mass excision of the library was performed to obtain pBK-CMV phagemid clones in the host strain XLOUR. Single pass DNA sequencing was performed using the T3 promoter primer: 5' ATTAACCGCACTAAAGGGA 3'. This library was constructed by Alex Richman."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  conditions in the dark at room temperature on filter paper with water, nystatin and cefotaxime in covered crystallization dishes. Five-day old seedling roots were then harvested, total RNA was prepared, poly(A) RNA was purified, one primary unamplified cDNA library was made, and 1 million pfu were in vivo excised to give palluescript SK(-) cDNA phagemids. These steps were performed in the TJ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oat Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or above. For more details on library preparation and sequence analysis see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Close laboratory at the University of California, Riverside (Choi, Close, Fenton). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /note="Vector: lambdaZAP; Site_1: EcoR1; Site_2: Xho1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (CACTGTGTGT); Site_2: Draili (CACCATCTG); 1st strand cDNA was primed with an oligo(dT) primer
[ATGTGGCCTTTTTTTTTTTTTTTTT]; double-stranded cDNA was ligated to a Draili adaptor [TGTTGCCTACTGG], digested and cloned into distinct Draili sites of the pME18S-FL3 vector (5' site CACTGTGTG, 3' site CACCATGTG). XhoI should be used to isolate the cDNA insert. Size selection was performed to exclude fragments <1.5kb. Library constructed by Dr. Sumio Sugano (University of Tokyo Institute of Medical Science). Custom primers for; sequencing: 5' end primer CTTCTGCTCTAAAAGCTTGCG and 3' end primer CGACCTGCAGCACA."

"The yeast FET5 gene encodes a FET3-related multicopper oxidase
T implicated in iron transport.";

L Mol. Gen. Genet. 256:547-556(1997).

C -!- FUNCTION: IRON TRANSPORT MULTICOPPER OXIDASE, WHICH IS REQUIRED
FOR FERROUS IRON HIGH AFFINITY UPTAKE. MAY BE REQUIRED TO OXIDIZE
C FE(II) AND RELEASE IT FROM THE TRANSPORTER. ESSENTIAL COMPONENT C
COPPER-DEPENDENT IRON TRANSPORT;
C COPACTOR: THIS PROTEIN BELONGS TO THE MULTICOPPER OXIDASES WHICH
C CONTAIN THREE DISTINCT CU CENTERS KNOWN AS TYPE 1 OR NORMAL, AND TYPE 3 OR COUPLED BINUCLEAR (BY SIMILARITY).

C -!- SIMILARITY: BELONGS TO THE MULTICOPPER OXIDASE FAMILY.

-!- SIMILARITY: CONTAINS 3 PLASTOCYANIN-LIKE DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Murakami Y., Naitou M., Hagiwara H., Shibata T., Ozawa M., Sasanuma S.-I., Sasanuma M., Tsuchiya Y., Soeda E., Yokoyama Yamazaki M., Tashiro H., Eki T.; Yamazaki M., Tashiro H., Eki T.; Tanalysis of the nucleotide sequence of chromosome VI from Saccharomyces cerevisiae.";
